

## **6.S196/PPAT Prototype and Success Metric Checkpoint**

**To occur in Lab, Monday 14 Nov 2011**

Each team has proposed a set of qualitative and/or quantitative “success metrics” with which to evaluate the progress of its AT solution for the client. Moreover, by next Monday each team will have (or should have!) a prototype solution in place, even if it is only partially functional.

Next Monday, November 14, the PPAT staff will meet with each team to view its prototype solution and discuss its success metrics as applied to the prototype. We expect each team to bring its prototype solution to lab and show it to us informally. We also ask each team to bring a brief (no more than one page) writeup describing the current state of their prototype, and the results of evaluating each stated success metric for the current prototype. (Even if a particular success metric can not be evaluated, you should list it anyway and state this fact.) Please bring the writeup as hardcopy.

Each team will receive written feedback about their prototype and success metric evaluation, along with a letter grade, in Lab on November 21st.
