Mini-Quiz 11

1. Write your name:

Problem 1 Yeah! Another voting question!
Suppose that in Florida, each of 6 million voters tosses a fair coin, independently, to decide whether to vote for Bush or Gore.

(a) What is the expected number of votes for Bush?

What is the variance?

What is the standard deviation?

:Solutions Expected number of votes for Bush = 3 million Variance = npq = $\frac{6{,}000{,}000}{4} = 1.5$ million Standard deviation = $\sqrt{variance} \approx 1225$

2.
